

Protect Hybrid Cloud Infrastructure Against Advanced Threats with Microsoft Defender for Cloud

150%

more ransomware attacks in 2021¹

51%

of SMBs don't have cybersecurity measures in place²

1 in 5

online small businesses have been the victim of a cyberattack²

Reduce Risk and Costs Across Cloud and Hybrid-Cloud Environments

Organizations need integrated solutions that can protect servers and business data against evolving cyber threats. Microsoft Defender for Cloud is an integrated solution designed to protect servers and other resources located almost anywhere. It is available at no cost for the first 30 days. After 30 days, Defender for Servers can be purchased with pay-as-you-go pricing.

With Microsoft Defender for Cloud, you can:

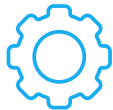

Protect servers, data, and files, regardless of location.

Continuously assess security across on-premises, Azure, and other cloud scenarios.

Protect against cyberattacks with Microsoft threat intelligence.

Simplify security management with built-in controls and automation, plus AI for intelligent recommendations on next steps.

Strengthen both security and regulatory compliance.

Benefits of Microsoft Defender for Cloud Security

Protect across diverse workloads

whether on Azure, other clouds, or on-premises and meet regulatory compliance goals

Simplify security management

with a single portal that has built-in artificial intelligence and automation tools

Improve security best practices

through ongoing assessment, visualization, and recommendations

¹ Microsoft fires back at CloudStrike on cybersecurity, Bloomberg Technology, December 2021.
